Subject: 8070 WSM's: Deeper rated.

Sonardyne has announced that all Type 8070 Wideband Sub-Minis have been re-classified from a 3,000 metre depth rating to 4,000 metre depth rating.

The change not only applies to newly manufactured units but all Type 8070 units currently in the field.

No mechanical modifications or new parts are required to benefit from the extended depth capability.

Your existing 3000m rated units require an 4000m endcap overlay sticker

Should you require any further clarification or would like new bottom endcap 4,000 meter depth rated stickers please contact customer support on support@sonardyne.com or +44 1252 877600.
